WeatherTech®
Sunroof Wind Deflector
For Mercedes-Benz® Vehicles
Installation Instructions

Hardware

(2) Screws
(2) MagiClip™ cones and clips
(1) Sunroof Deflector with AirCushion™ Gasket

Tools Needed

(1) #20 Torx driver
(1) #2 Phillips screw driver

1 Make sure the sunroof is clean and dry. Fully open and start on the left side by removing the (2) front Torx screws from the black metal rail that runs along each side of the sunroof opening. Do not lose these screws because they will be used later. After removing the screws, pull back the weather stripping as shown.

2 Slide the metal clip labeled “L” behind the black metal rail so that the rear hole in the clip lines up with the forward screw hole in the metal rail. Install (1) of the Torx screws (previously removed) in this hole, but do not tighten at this time. Repeat these steps with the clip labeled “R” on the right side.

3 After installing both clips, reinstall the weather stripping. Reinstall the (2) remaining Torx screws into their original locations and tighten all (4) Torx screws. Ensure that the MagiClip™ remains positioned as high up as possible while tightening the forward Torx screws.

4 Assemble the MagiClip™ by sliding the plastic cone nuts onto the flat end of the clips as shown.

5 Place the deflector on the vehicle roof positioned so that the holes in the deflector approximately align with the MagiClips™.

6 Press upward on the MagiClip™ with one hand while turning the screws clockwise with some downward pressure. DO NOT TIGHTEN screws fully at this time.

7 Repeat steps 5-6 on the right side of the deflector. Carefully adjust the deflector until its is positioned straight. Tighten both screws until the MagiClip™ is flush with the bottom of the deflector. Do not over tighten.

Congratulations!
Your new WeatherTech® Side Window Deflectors have been installed!

Your WeatherTech® Side Window Deflectors carry a 3 year warranty against defects in materials and workmanship when installed correctly.
