TechFloor utilizes a snap together loop and tab attaching system. This system creates a more seamless look.

TechFloor tiles are quickly attached to each other by simply laying the tab of one tile over the loop of the next.

NOTE: loops on every tile must point in the same direction. Once the tabs are laid over the loops, simply snap the tiles down into place.

Go over each seam with a rubber mallet to ensure that all tiles are tightly snapped into place.

PLEASE NOTE: As stated above the loops on every tile must point in the same direction. This is especially important to remember when ordering our 3"x 12" Premium with TractionSquares™ tiles, since they are the most difficult to determine. We highly recommend that you keep the loops on the bottom and right side of the tile.
