Titanium License Plate Frame

Titanium License Plate Frame Mounting Instructions

TOOLS NEEDED • #2 Phillips Head Screwdriver • 7/16” Wrench

1. Remove the Click and Stay® screw caps from the mounting holes in the WeatherTech® Titanium License Plate Frame by pushing them out from the back side.

2. Select the four mounting screws that are most appropriate for your vehicle (If your mounting location only uses 2 holes, then see step 2A FIRST). Carefully position your Titanium frame and license plate assembly into place on your vehicle and using a #2 Phillips Head Screwdriver, securely fasten with the screws you have chosen, BEING CAREFUL NOT TO OVER-TIGHTEN.

2A. If the mounting location on your vehicle only uses two screws, then first select machine screws and matching nuts from the hardware pack. Install these two screws through the Titanium frame and the license plate holes that DO NOT go to the mounting holes on the vehicle. Using a #2 Phillips Head screwdriver and a wrench, tighten the two nuts onto the end of each screw, locking the assembly together, BEING CAREFUL NOT TO OVER-TIGHTEN.

3. Finally, position the Click and Stay® screw caps over each screw on your Titanium License Plate Frame with the drain hole on the bottom and push firmly to snap each one into place.

CONTENTS:
• Titanium License Plate Frame
